The FipsServer® system brings local, regional and national weather information together into one customizable website and alerting system. The webpage displays the following items in rotation:

- Local weather readings from a professional weather system, including local lightning sensor.
- NOAA Weather Radio SAME / EAS (Emergency Alert System) alerts.
- Alerts from the National Weather Service digital database including new CAP 1.2 HazCollect alerts.

- National Weather Service local and national text and graphic forecasts, satellite and radar images
- Custom local radar with warning and storm vector overlays and optional lightning overlay.
- Local traffic, security or other camera.
- Local websites of interest, such as IFLOWS for flooding information and traffic.
- Customized local links such as School Closings.
- Live streaming NOAA Weather Radio accessible on line or via cell phone.
- Automated immediately accessible hourly graphic weather data.

The website is designed to be easily viewed on flat-screen TV displays making it an excellent tool for EOCs.
- Remote server for added reliability and plug and play installation.
- Email and SMS alert SAME/EAS messages.
- Mobile version for smart phones and PDAs.
- Ethernet-enabled LED Signboards.
- Ethernet-enabled printing of SAME /EAS alerts.
- Client's logo appears on the web site.
