# The Thunder Eagle® Alert System

The Thunder Eagle® Alert System is an easy-to-use, flexible, all-purpose communications system. Our hardware and software easily integrate into your existing network.

Thunder Eagle® has written easy to use software to add real time local readings from a client owned Texas Weather Instruments professional weather station to the Emergency Alert System messages from NOAA weather radio. In addition to distributing this critical weather information by email, text alerts, LED signboards, printers, two way radio systems, including trunked radio systems, and public address systems, Thunder Eagle® has created software to graphically place this information on the web for instant access by your entire community!
