

# The Thunder Eagle® Alert System

The **Thunder Eagle® Alert System** is an easy to use and flexible all-purpose communication system.

Under normal conditions our signboards display user-programmable routine messaging from our **FipsSender™** software.

When emergency conditions arise, Emergency Alert System (EAS) and National Weather Service (SAME) alert messages are automatically decoded, matched and translated by the **Alert Eagle® 400** and sent to the **FipsSender™** software for immediate transmission to signboards, emails, wireless text, printers, buzzers and strobe lights. The EAS system has been expanded to transmit 'bad event' alert messages, in addition to bad weather and Amber missing children alerts.

Designated individuals within your organization can also send messages from their PC to any individual or group of devices on your network. Our hardware and software easily integrate into your existing network. Software updates are posted on our web site.

The **Alert Eagle® Alert System** can be used by each Department in your organization to send routine or emergency messages to individual or group locations.

For example, Fire/Rescue can send messages to any firehouse stating "Hospital Emergency Room on Bypass". A dispatcher can post calls or special notifications. The School Superintendent can send messages to any school or schools.

For the past 12 years **Thunder Eagle, Inc.** has provided world class emergency messaging solutions to Federal, State, County and Local Governments, and to Fire, Police and EMS Departments throughout the country, as well as to private corporations.
